## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 10-14, drawn to a method for storing a multi-bit value, classified in class 365, subclass 168.
- II. Claims 15-19, drawn to a multi-bit DRAM cell, classified in class 365, subclass 149.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and Group II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the multi-bit DRAM cell, as claimed in the invention of Group II, can be used in a materially different process of using that product; for example, integrating the multi-bit DRAM cell into a semiconductor IC including other semiconductor circuitry, such as a microprocessor, or an embedded DRAM or SRAM.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
